The DermTech Melanoma Test

- Detects genomic markers associated with melanoma to identify high-risk lesions at their earliest stages^{1,a,b}
- Utilizes **DermTech Smart Stickers™**
- Typically takes less than 5 minutes per lesion

Objective, actionable results distinguish benign from high-risk lesions^{1,4}

NEGATIVE: >99% probability that a lesion is not melanoma¹⁻³

POSITIVE: Informs next steps for further evaluation and treatment

DermTech

DERMTECH.COM | 1.866.450.4223
11099 North Torrey Pines Road, Suite 100
La Jolla, CA 92037
US-DTMT-22-00041

^aThe DermTech Melanoma Test is comprised of 2 assays:

1. The Pigmented Lesion Assay (PLA) detects 2 RNA biomarkers: LINC00518 and PRAME.
2. The TERT Add-On Assay detects DNA TERT promoter mutations and is only run following PLA testing when ordered and if sufficient genomic material is available.

^bIndicated for use on melanocytic lesions having one or more ABCDE criteria (Asymmetry, Border, Color, Diameter, Evolving).

VTAMA cream can give plaque psoriasis patients significantly clearer skin. So they're free to think about ... literally anything.

VTAMA cream is a once-daily, non-steroidal topical for adults with plaque psoriasis.^{1,2}

36% and 40% Physician Global Assessment (PGA) success rate* in two 12-week pivotal studies vs 6% and 6% for vehicle¹

Safe and well-tolerated even on the face, neck, intertriginous areas, inflammatory areas, axillae, genitalia and anal crux.^{1,2}

A median ~4-month off-treatment effect seen in long-term, open-label extension study of patients (n=75)²

[See the data. VTAMA.com](http://www.vtama.com)

*PGA success rate defined as PGA=0 or 1- and ≥2-grade improvement from baseline at week 12.
Important Safety Information: Indications: VTAMA[®] tapinarof cream 1% is a novel hydrocarbon receptor agonist indicated for the topical treatment of plaque psoriasis in adults. **Adverse Events:** The most common adverse reactions (incidence ≥1%) in subjects treated with VTAMA cream were folliculitis (red raised bumps around the hair pores), nasopharyngitis (pain or swelling in the nose and throat), contact dermatitis (skin rash or irritation, including itching and redness, peeling, burning, or stinging), headache, pruritus (itching), and influenza (flu). You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.
